The screenshot displays the WooCommerce Extensions marketplace interface. At the top, there is a navigation bar with the 'Woo' logo and links for 'Sell', 'Extensions', 'Resources', and 'Enterprise Ecommerce'. Below this is a search bar with the text 'WooCommerce Extensions' and a search input field containing 'Search extensions'. A secondary navigation bar shows 'Extensions 849', 'Themes 85', 'Documentation 2668', and 'See Also 1330'. The main content area is titled '849 extensions found in WooCommerce Extensions' and features a 'Country' filter set to 'All Countries'. A 'Category' filter is also present, with 'All Extensions' selected. The main display shows a grid of extension cards. The first row includes 'WooPayments' (4.35 stars), 'Stripe' (4.30 stars), and 'WooCommerce Tax' (4.4 stars). The second row includes 'WooCommerce Google Analytics', 'PayPal Payments', and 'Google Listings & Ads'. Each card provides a brief description and a 'Free download' button.

# The AI Code Editor

Built to make you extraordinarily productive,  
Cursor is the best way to code with AI.

DOWNLOAD FOR MAC

The screenshot displays the Cursor AI code editor interface. On the left, a code editor window titled 'mod.rs' shows Rust code for a transport stack. A tooltip is visible over the code, asking to implement a cleanup function. On the right, a 'CHAT' and 'COMPOSER' panel is active, showing a conversation about making certificate switching easier in transport listeners. The chat panel includes a text input, a 'Send' button, and a list of messages.

```
mod.rs x
Implement the cleanup function for the transport stack. Do not make the upgrade listeners optional.
[Accept] [Reject] Follow-up instructions... [K]

72 pub(crate) struct TransportStack {
73     l4: ListenerEndpoint,
74     tls: Option<Arc<Acceptor>>,
75     // Listeners sent from the old process for graceful upgrade
76     #[cfg(unix)]
77     upgrade_listeners: Option<ListenFds>,
78     upgrade_listeners: ListenFds,
79 }
80
81 impl TransportStack {
82     pub fn as_str(&self) -> &str {
83         self.l4.as_str()
84     }
85
86     pub async fn listen(&mut self) -> Result<> {
87         self.l4
88         .listen()
89     }
90 }
```

CHAT COMPOSER

mod.rs Current File  
Could you make it easier to switch certificates in the transport listeners?

I'll help modify the code to make certificate switching more flexible. The main changes will be to enhance the `TlsAccept` trait and modify how certificates are handled in the `TlsSettings`. Here are the key changes:

```
mod.rs [Ask] [Copy] [Apply]
// ... existing code ...

// The APIs to customize things like certificate during TLS ser
#[async_trait]
pub trait TlsAccept {
    // Called during TLS handshake to select and apply certific
    // Returns true if certificates were successfully applied
    async fn certificate_callback(&self, ssl: &mut TlsRef) -> bo
    // Default implementation does nothing and indicates no
    false
}
```
